Technical information should always be available to the foremen and mechanics, because their careful and constant adherence to the instructions is essential to ensure vehicle road-worthiness and safety. In addition, the normal basic safety precautions for working on motor vehicles must, as a matter of course, be observed.

Technical data

Identification

(ARL005666; Edition 02.2018)

All information can be found in \Rightarrow Servicing 6-cylinder TDI engine, common rail; Rep. gr. 00; Identification.

2 Safety precautions

All information can be found in \Rightarrow Servicing 6-cylinder TDI engine, common rail; Rep. gr. 00; Safety precautions.

Repair instructions 3

All information can be found in \Rightarrow Servicing 6-cylinder TDI engine, common rail; Rep. gr. 00; Repair instructions.

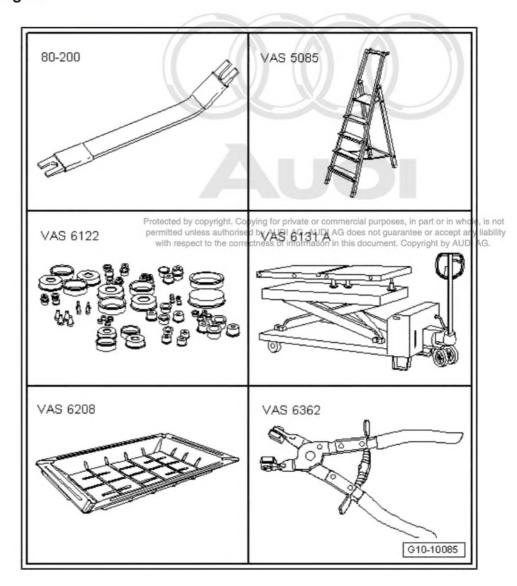

10 – Removing and installing engine

Removing and installing engine

- ⇒ "1.1 Removing engine", page 4
- ⇒ "1.2 Separating engine and gearbox", page 21
- ⇒ "1.3 Securing engine to engine and gearbox support", page 29
- ⇒ "1.4 Installing engine", page 33

1.1 Removing engine

Special tools and workshop equipment required

- ♦ Removal lever 80 200-
- Stepladder VAS 5085-
- Engine bung set VAS 6122-
- Scissor-type assembly platform VAS 6131 B-
- Drip tray for workshop hoist VAS 6208-
- Hose clip pliers VAS 6362-

Support set for Audi - VAS 6131/10-

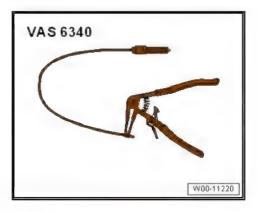

- Supplementary set, Audi A8 >2002 VAS 6131/11-
- Supplementary set, Audi Q7 >2005 VAS 6131/13-

♦ Hose clip pliers - VAS 6340-

Procedure

WARNING

When working on all parts of the exhaust system:

 Observe safety precautions when working on the exhaust system ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 00; Safety precautions; Safety precautions when working on the exhaust system.

Note

- The engine is removed from underneath together with the gearbox and subframe (with lock carrier installed).
- Fit cable ties in the same locations when installing.
- Observe rules for cleanliness ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 00; Repair notes; Rules for cleanliness .
- Bonded rubber bushes can only be turned to a limited extent. Therefore, before tightening the bolts, suspension components with bonded rubber bushes must be brought into a position corresponding to the normal position while driving (unladen position). Otherwise, the bush would be subject to torsion loading and its service life shortened.
- Before starting work, determine unladen position ⇒ Running gear, axles, steering; Rep. gr. 00; Repair notes; Lifting suspension to unladen position (vehicles with coil springs) or determine reference position ⇒ Running gear, axles, steering; Rep. gr. 00; Repair notes; Lifting suspension to unladen position (vehicles with air suspension).

WARNING

Make sure the vehicle cannot tip over when the engine is removed.

Secure the vehicle, to do so, the luggage compartment must be empty.

The fuel system operates at extremely high pressure. This can cause injury.

- The fuel pressure in the high-pressure section of the injection system must be reduced to a residual pressure prior to opening the system.
- Bring front wheels into straight-ahead position.
- Carefully pull engine cover panel off retaining pins one after another -arrows-. Do not jerk engine cover panel away, and do not try to pull on one side only.

Note

- The electromechanical parking brake must be released before disconnecting the battery so that the propshaft can be turned during removal.
- If the turbocharger has to be removed for subsequent work, the turbocharger 1 control unit - J724- must be moved into the "closed" position.

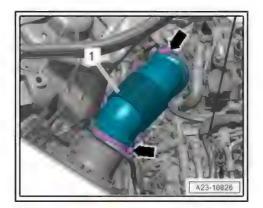

, ALC ALA CIA de mistareten de estres las ti

of the at the state of Control Alla Alla

If performing repair work for turbocharger, move turbocharger 1 control unit - J724- into "closed" position:

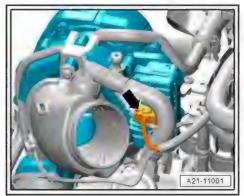

- Release hose clips -arrows- and remove air pipe -1-.

- Select 01 Engine electronics, Final control diagnosis in "Guided Fault Finding" ⇒ Vehicle diagnostic tester.
- Unplug electrical connector -arrow- as soon as turbocharger 1 control unit - J724- is in closed position (held 10 seconds). This will cause an entry to be stored in the event memory of the engine control unit.
- The de-energised turbocharger 1 control unit J724- remains in this position, allowing access to the bolts for the turbocharg-

Removing engine (continued):

- Switch off ignition.
- Disconnect earth wire from battery terminal ⇒ Electrical system; Rep. gr. 27; Battery; Disconnecting and connecting battery .
- Discharge refrigerant circuit ⇒ Air conditioner with refrigerant R134a; Rep. gr. 87; Refrigerant circuit, or ⇒ Air conditioners with refrigerant R1234yf - General information; Rep. gr. 87; Working with the air conditioner service station; Discharging refrigerant circuit.
- Remove body brace ⇒ Running gear, axles, steering; Rep. gr. 40; Suspension strut, upper links; Removing and installing body brace.
- Remove lock carrier cover ⇒ General body repairs, exterior; Rep. gr. 63; Bumper (front); Removing and installing attachments.

Principals, and Country of the is not a part to write is not part to the second of the seco who exect the contress that it has a protection att., AUDIAG

WARNING

Risk of scalding due to hot steam and hot coolant.

- The cooling system is under pressure when the engine is
- To allow pressure to dissipate, cover filler cap on coolant expansion tank with cloth and open carefully.

Protected by copyright. Copying for private or co

- Open filler cap -arrow- on coolant expansion tank
- Remove both front wheels ⇒ Running gear, axles, steering; Rep. gr. 44; Wheels, tyres.
- Remove wheel housing liners (front left and front right) => General body repairs, exterior; Rep. gr. 66; Wheel housing liners; Removing and installing wheel housing liner (front).
- Remove wheel spoilers (front) on both sides ⇒ General body repairs, exterior; Rep. gr. 66; Wheel housing liners; Exploded view - wheel housing liner (front) .
- Remove noise insulation panels ⇒ General body repairs, exterior; Rep. gr. 66; Noise insulation; Removing and installing noise insulation.

Vehicles with four-wheel drive:

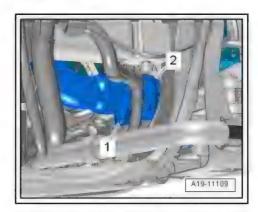

Remove propshaft ⇒ Rear final drive; Rep. gr. 39; Propshaft; Removing and installing propshaft.

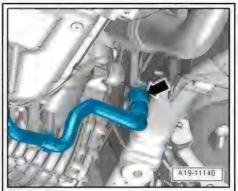

All vehicles:

- Place drip tray for workshop hoist VAS 6208- beneath en-
- Remove drain plug -1- and drain off coolant.
- Lift retaining clip -2- and disconnect coolant hose from radia-

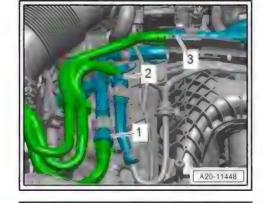

- Lift retaining clip -arrow- and disconnect coolant hose (rear
- Guide coolant hose downwards and drain off coolant.

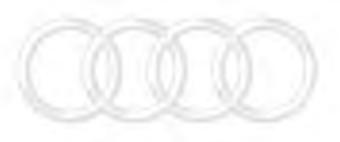

- Disconnect fuel hoses -1, 2, 3- \Rightarrow Fuel supply system, diesel engines; Rep. gr. 20; Plug-in connectors; Disconnecting plug-in connectors.
- Seal off open lines and connections with plugs (thoroughly cleaned) from engine bung set VAS 6122- .
- Move coolant hoses clear and move to right side.

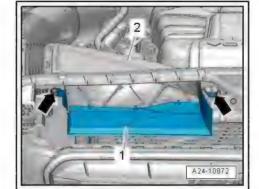

- Remove bolts -arrows- and detach air duct -1-.

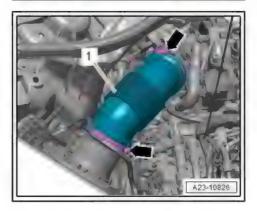

Remove bolts -arrows- and detach air duct -2- from lock car-

pyright. Copying for private or commercial purposes, in part or in whole, is not Note sed by AUDI AG. AUDI AG does not guarantee or accept any liability rrectness of information in this document. Copyright by AUDI AG

Disregard -item 1-.

- Release hose clips -arrows- and remove air pipe -1-.

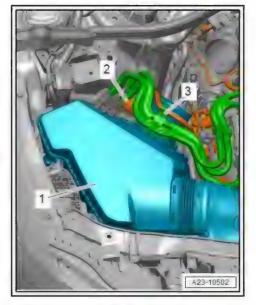

- Unplug electrical connector -2- at air mass meter G70- and move clear.
- Lift off air cleaner housing -1-.

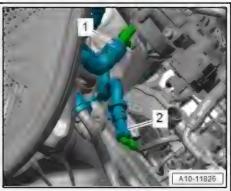

Note

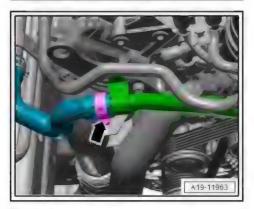

Disregard -item 3-.

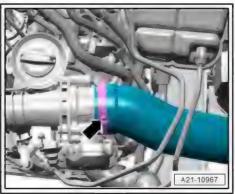

- Lift retaining clip -1- and disconnect coolant hose.
- Press release tabs on both sides and detach vacuum hose -2-. with respect to the correctness of information in this document. Copyright by AUDI

Release hose clip -arrow- and disconnect coolant hose from coolant pipe (front).

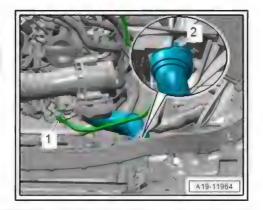

Release hose clip -arrow- and detach air hose.

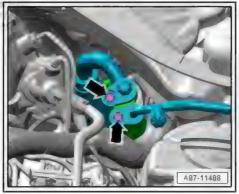

- Lift retaining clip -2- and disconnect coolant hose (top left) from radiator.
- Lift retaining clip -1- and disconnect coolant hose.

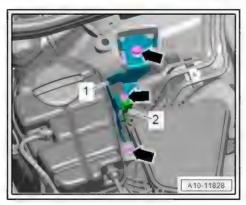

Remove bolts -arrows- and disconnect refrigerant lines.

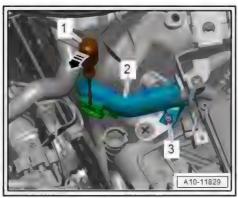

with respect to the correctness of information in this document. Copyright by AUD

- Unscrew bolts -arrows- and detach brackets -1, 2-.
- Press coolant expansion tank slightly towards front.

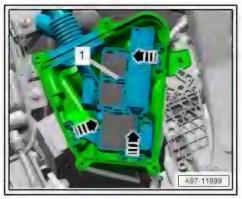

- Unscrew nut -3-.
- Use a screwdriver -1- to release catch -arrow- and move wiring duct -2- clear.

 Remove bolts -arrows- and detach cover -1- for electronics box.

 Release catches -arrows-, detach relay carrier with fuse holder -1-, move clear and place on engine.

Caution

Danger of damage to refrigerant lines and hoses.

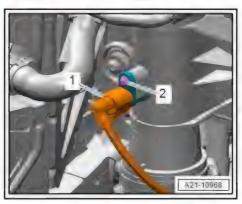

- ◆ Do NOT stretch, kink or bend refrigerant lines and hoses.
- Remove bolt -arrow-, disconnect refrigerant line from air conditioner compressor and move to one side.
- Seal off open lines and connections with plugs (thoroughly cleaned) from engine bung set - VAS 6122- .
- Unplug electrical connector -1- for intake air temperature sender - G42- and move electrical wiring clear.

Note

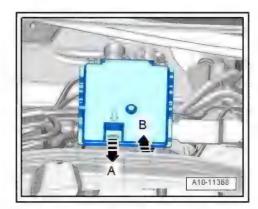

Disregard -item 2-.

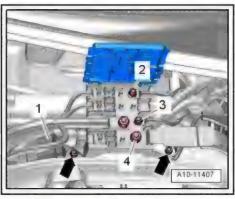

Profested by single gift. Copyright of elements of elements of particles and particles with a constraint of the second of the se

Release retainer -arrow A- and open cover -arrow B-.

- Remove nuts -2, 3 and 4- and move electrical wiring clear.
- Detach electrical connector -1- from bracket and unplug.
- Remove bolts -arrows- and detach terminal 30 wiring junction 2 - TV22- from plenum chamber partition panel.

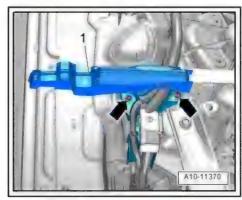

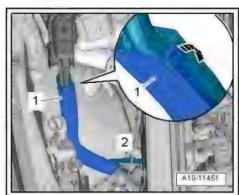

- Press foam wedge -1- to one side.
- Remove bolts -arrows-.

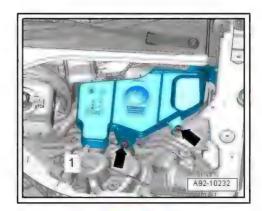

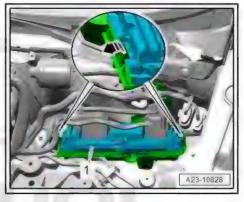

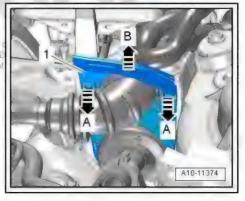

- Place drip tray for workshop hoist VAS 6208- underneath.
- Unscrew bolts -arrows- and pull filler neck -1- out of washer fluid reservoir and through opening in body to right side.

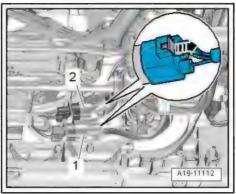

Release catches -arrow- and detach engine/motor control unit - J623- -item 1- from bracket.

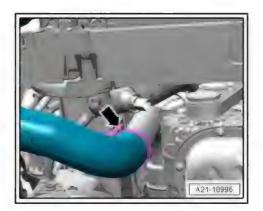

- Release catches -arrows A- and lift off wiring protector -1--arrow B-.
- Place wiring harness on engine and secure engine/motor conving for trol unit - J623- to prevent it from dropping."

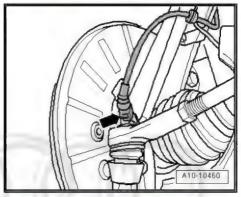

- Unplug electrical connector -1- and, if fitted, -2- for radiator fan (push retainer to the rear -arrow- and press down release catch).
- Move electrical wiring harness clear.

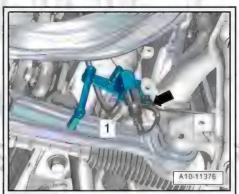

Release hose clip -arrow- and detach air hose from air pipe.

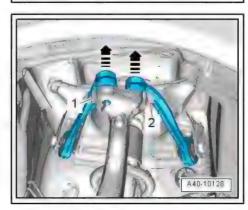

Unplug electrical connector -arrow- at front wheel speed sensor on both sides (-G45- and -G47-).

- If fitted, unplug electrical connector -1- at front vehicle level senders on both sides (-G78- and -G289-) and move electrical wiring clear -arrow-.
- Remove brake caliper and tie up in wheel housing with wire (brake hose remains attached) ⇒ Brake system; Rep. gr. 46; Front brakes; Removing and installing brake caliper .

- Remove nut -2- and pull out bolt -1-.
- Pull upper suspension links upwards out of wheel bearing housing -arrows-.
- Repeat procedure on opposite side of vehicle.

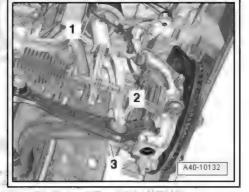

- Remove bolt -1- for anti-roll bar on both sides.
- Remove nut -3- on both sides.

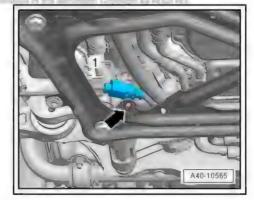

Note

The bolts -2- are removed at a later stage.

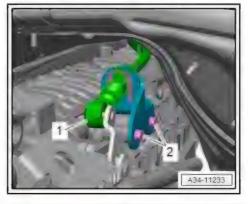

- Move clip clear -arrow-.
- Unplug electrical connector -1- and move wiring clear.
- Remove subframe cross brace ⇒ Running gear, axles, steering; Rep. gr. 40; Subframe; Removing and installing subframe cross brace.

Vehicles with front-wheel drive

- Pry ball socket -1- of selector lever cable off gearbox selector lever using removal lever - 80 - 200- .
- Remove bolts -2-.

All vehicles:

- Remove bolts -arrows- on both sides and detach heat shield -1- for longitudinal member.
- Detach intermediate steering shaft from steering rack and move clear by telescoping splines together ⇒ Running gear, axles, steering; Rep. gr. 48; Steering column; Removing and installing intermediate steering shaft.

- Unplug electrical connector -2- at power steering control unit J500- (release retainer -arrow- and press down release catch).
- Unplug electrical connector -1- at power steering control unit - J500- .
- Move electrical wiring harness clear.

WARNING

Reducing agent can cause skin irritation.

- ♦ Observe safety measures when handling reducing agent ⇒ Servicing 6-cylinder TDI engine, common rail; Řep. gr. 00 ; Safety precautions; Safety precautions when working on the SCR system .
- Put on safety goggles.

mmercial purpo -- reactor in whose is not

"AG door not go in the interest by em 1. Shart Caprarte, Auc Au

Note

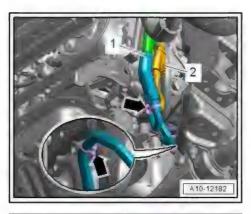

Hold a clean cloth under the separating point to catch escaping reducing agent.

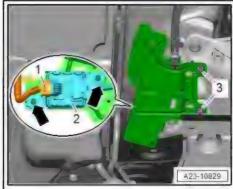

- Unplug electrical connector -2-.
- Press release tabs and disconnect SCR metering line -1-.
- Unclip SCR metering line -arrows-.
- Unclip SCR metering line at subframe (rear left) and guide out metering line.
- Seal off open lines and connections with plugs (thoroughly cleaned) from engine bung set - VAS 6122- .
- Unplug electrical connector -1-.
- Unscrew bolts -3- and tie control unit for NOx sender 2 J881--2- with bracket to SCR catalytic converter.

Note

Disregard -arrows-.

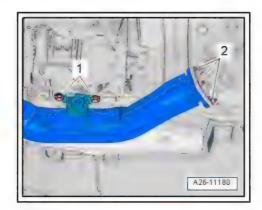

Unscrew nuts -2- and detach SCR catalytic converter.

Note

If separating the engine from the gearbox for subsequent work, unscrew the bolted connection securing the drive plate to the flywheel/torque converter ⇒ page 25.

Set up the scissor-type assembly platform as follows:

Set up scissor-type assembly platform - VAS 6131 B- with support set for Audi - VAS 6131/10- , support set -VAS 6131/11- and supplementary set -VAS 6131/13- as follows:

Platform coordinates	Parts of support set for Audi - VAS 6131/10- , support set -VAS 6131/11- and supplementary set - VAS 6131/13-					
B4	/13-4	/10-4	/10-5	/13-1		
G4	/13-4	/10-4	/10-5	/13-1		
B6	/10-1	/10-2	/10-5	/10-11		
G6	/10-1	/10-2	/10-5	/10-11		
A8+C8	/13-6	,		/13-2		
F8+H8	/13-5			/13-2		
B14	/10-1	/10-3	/10-5	/11-1		
G14	/10-1	/10-4	/10-5	/11-1		

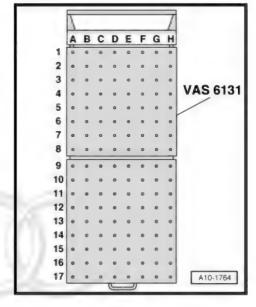

- Initially hand-tighten the support elements on the scissor-type assembly platform.
- Position scissor-type assembly platform VAS 6131 B- horizontally.
- Take note of spirit level (bubble gauge).
- Position scissor-type assembly platform VAS 6131 B- below engine/gearbox assembly. permitted unless authorised by AUDI AG, AUDI AI

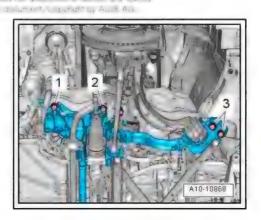

WARNING

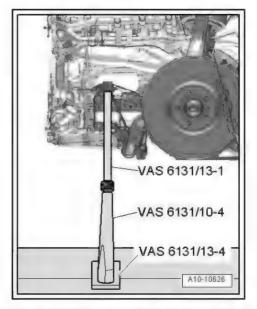

Accident risk if subframe mountings are detached.

- Subframe bolts -2- and -3- must not be loosened.
- Remove subframe bolts -1- on both sides.

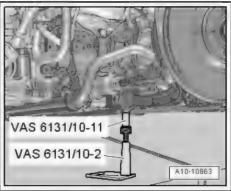

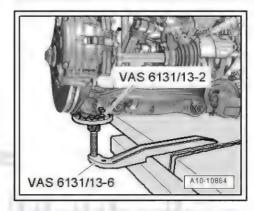

- Position support elements from -VAS 6131/10- and -VAS 6131/13- at front left and right of subframe as shown.
- Make sure that threaded spindles are screwed in completely.

Position support elements from -VAS 6131/10- (rear left and right) at front attachment points of subframe cross brace as shown.

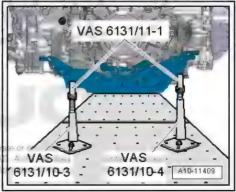

Position support elements from -VAS 6131/13- under left and right wheel bearing housings as shown.

- Position support elements from -VAS 6131/10- and -VAS 6131/11- (rear left and right) at tunnel cross member as shown.
- Turn all spindles for support elements upwards until all locating lugs make contact with mounting points.
- Tighten base plates for support elements to 20 Nm on scissor-type assembly platform VAS 6131 B- .

Pritate 11, a six ant Cos, catterne permanent, and company

Attract to the metrics.

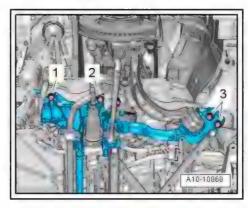

- Mark installation position of subframe and tunnel cross member on longitudinal members with felt-tip pen.
- Unscrew subframe bolts -2- and -3- on both sides in several stages and in diagonal sequence.

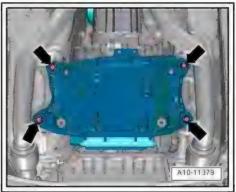

Note

Bolts -1- are already removed.

Remove bolts -arrows- on tunnel cross member.

Remove bolt -2- on both sides.

Note

Bolts -1, 3- have already been removed.

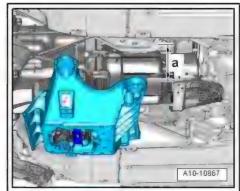

Caution

Danger of damage to hoses, pipes and wiring connections and to engine compartment.

- Check that all hoses and wiring connections between engine, gearbox, subframe and body have been detached.
- Carefully guide out engine/gearbox assembly with subframe from engine compartment when lowering.
- Carefully guide suspension struts past longitudinal members.

- Lower engine/gearbox assembly using scissor-type assembly platform - VAS 6131 B- initially only as far as distance -a-.
- Dimension -a- = 100 mm (maximum).

- Pry ball socket -2- of selector lever cable off gearbox selector lever using removal lever - 80 - 200-.
- Press off securing clip -1- / loosen nut, and remove selector lever cable from gearbox.

Note

Take care not to bend or kink selector lever cable.

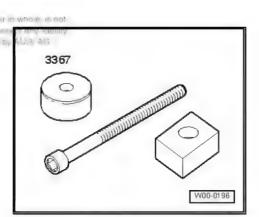

All vehicles:

- Lower engine/gearbox assembly.
- Pull out scissor-type assembly platform VAS 6131 B- with engine/gearbox assembly from underneath vehicle.

Special tools and workshop equipment required

1.3 Securing engine to engine and gearbox support

Special tools and workshop equipment required

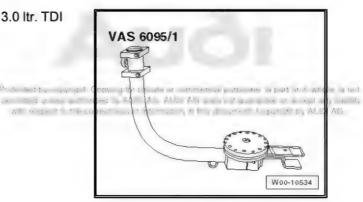

Lifting tackle - 3033-

◆ Engine and gearbox support - VAS 6095A-

 Universal mounting - VAS 6095/1- with bracket for 3.0 ltr. TDI engine Gen2 Evo - VAS 6095/1-14-

♦ Workshop hoist - VAS 6100-

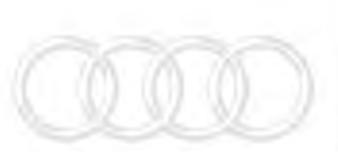

Lift arm extension (workshop hoist) - VAS 6101-

Procedure

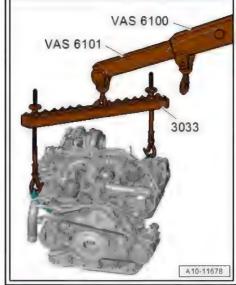

- Engine/gearbox assembly removed and secured to scissor-type assembly platform VAS 6131- (with engine detached from gearbox)
- Engine secured with support -VAS 6131/13-7-.
- Attach lift arm extension VAS 6101- to workshop hoist -VAS 6100-.
- Attach lifting tackle 3033- to engine lifting eyes and workshop hoist as shown in illustration.
- Take up weight of engine with workshop hoist, but do not lift.

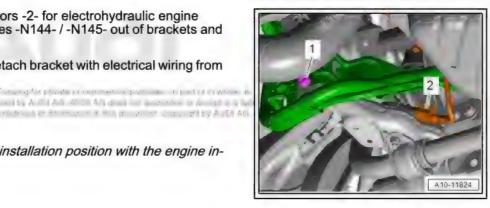

- Take electrical connectors -2- for electrohydraulic engine mounting solenoid valves -N144- / -N145- out of brackets and unplug (both sides).
- Unscrew bolt -1- and detach bracket with electrical wiring from subframe.

The illustration shows the installation position with the engine installed.

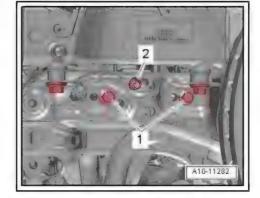

Remove bolt -2- for engine mounting on both sides.

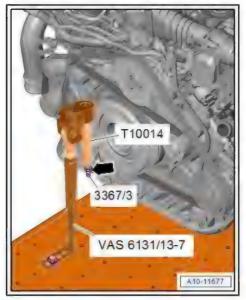

Note

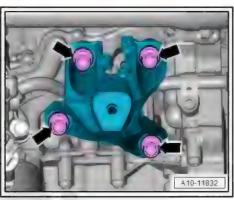

Disregard -item 1-.

- Remove support -VAS 6131/13-7- from engine.
- Lift engine off engine cross member.

Unscrew bolts -arrows- and remove engine support (left-side).

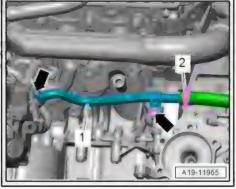

- Remove bolts -arrows-.
- Detach coolant pipe (left-side) -1- and move clear to side.

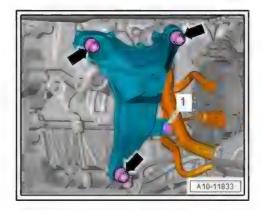

Note

Disregard -item 2-.

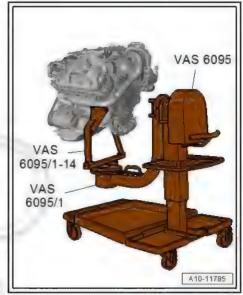

- Remove nut -1- and bolts -arrows- and detach engine support (right-side).
- Tie up starter on engine.

Using universal mounting - VAS 6095/1- and bracket for TDI engine 3.0 ltr. Gen2 Evo - VAS 6095/1-14-, secure engine to engine and gearbox support - VAS 6095A- (40 Nm) as shown in illustration.

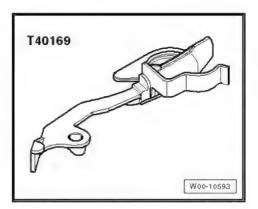

1.4 Installing engine

- Assembly mountings
 ⇒ "2.1 Exploded view assembly mountings", page 42
- ◆ Bolts securing engine to gearbox ⇒ Gearbox; Rep. gr. 34; Removing and installing gearbox; Tightening torques for gearbox

Procedure

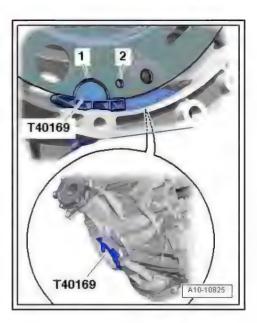

Note

- After removing, renew bolts tightened with specified tightening angle.
- Renew self-locking nuts and bolts as well as seals, gaskets and O-rings after removal.
- Do not remove plugs or protective caps until you are ready to fit the relevant line.
- Hose connections and air pipes/hoses must be free of oil and grease prior to fitting.
- Secure all hose connections with correct type of hose clips (as original equipment) ⇒ Electronic parts catalogue .
- Re-install all cable ties in the same locations when installing.
- Engine with subframe positioned on scissor-type assembly platform - VAS 6131 B-
- Engine secured with support -VAS 6131/13-7-.
- Install coolant pipe (left-side) ⇒ page 100.
- Install engine supports and engine mountings ⇒ page 42.
- Before installing gearbox, remove residue from threaded holes for engine/gearbox bolts in cylinder block using a thread tap.
- The following preparations are required before joining engine and gearbox:
- Insert assembly aid T40169- into gearbox housing and dualmass flywheel from below, as illustrated.
- The assembly aid must engage in the semi-circular recess -1- and in the inspection hole -2-.

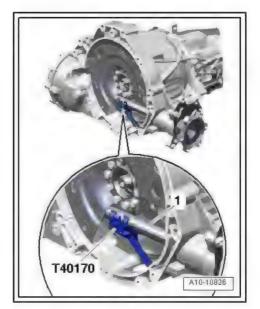

There is only one inspection hole on the circumference; turn the dual-mass flywheel accordingly.

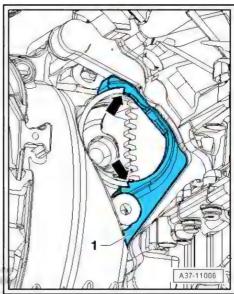

Insert pin of assembly aid into hole on gearbox housing.

Insert transport lock - T40170- into gearbox housing from below and clamp onto flange shaft -1-.

Fit starter and end seal -1- (where present) in correct installation position -arrows-.

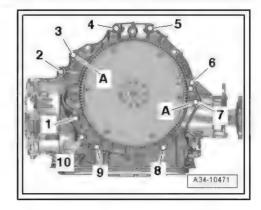

Check whether dowel sleeves -A- for centring engine and gearbox are fitted in cylinder block; install missing dowel

per tell a street Ad Ar A All Street

Probably of the street.

- Check whether aluminium bolts securing engine to gearbox can be reused; if so, apply marking ⇒ Gearbox; Rep. gr. 34; Removing and installing gearbox; Tightening torques for gear-
- Bring gearbox into position on engine and tighten bolts -3 \dots 10-.

sleeves.

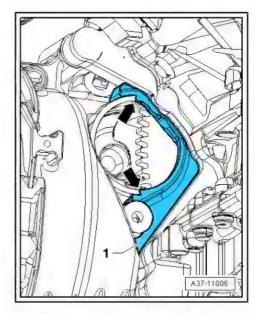

End seal -1- must be correctly fitted -arrows- before installing starter.

Note

Apply a small amount of lubricant to the end seal if the starter cannot be installed easily.

- Install starter ⇒ Electrical system; Rep. gr. 27; Starter; Exploded view - starter .
- Remove transport lock T40170- and assembly aid T40169-.

Note

The following step is necessary to ensure that the dual-mass flywheel is straight and that it makes even contact with the drive

plate.

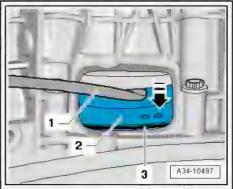

- Use assembly lever -1- to press dual-mass flywheel -2- slightly against drive plate -3- in direction of -arrow-.
- Bolt dual-mass flywheel onto drive plate as follows:

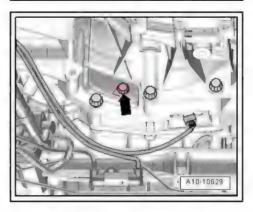

Note

Use ring spanner insert AF 16 - V.A.G 1332/14- to tighten bolts.

Screw in first bolt -arrow- hand-tight (2 Nm).

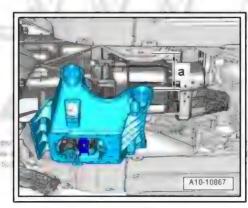

Caution

Irreparable damage can be caused if the camshaft timing chain slips.

- Turn crankshaft only in direction of engine rotation -arrow-.
- Turn crankshaft 180° further in normal direction of engine rotation with wrench, 21 mm T40263- and adapter -T40314- .
- Tighten bolt accessible in this crankshaft position to specified torque ⇒ Gearbox; Rep. gr. 30 ; Clutch; Exploded view - flywheel and dual clutch .
- Turn crankshaft by 60° each time and tighten remaining 5 bolts to specified torque ⇒ Gearbox; Rep. gr. 30; Clutch; Exploded view - flywheel and dual clutch .
- Hold ATF lines in installation position when joining engine and subframe.
- Install gearbox oil cooling valve N509- ⇒ page 94.
- Install ATF cooler ⇒ Gearbox; Rep. gr. 34; ATF circuit; Removing and installing ATF cooler.
- Secure drive shafts (left and right) to gearbox flange shafts ⇒ Running gear, axles, steering; Rep. gr. 40; Drive shaft; Exploded view - drive shaft .
- Install emission control module ⇒ page 164.
- Install injector for reducing agent N474- ⇒ page 175.
- Raise engine/gearbox assembly using scissor-type assembly platform - VAS 6131 B- initially as far as distance -a-.
- Dimension -a- = 100 mm (maximum).

pt any liability AUDI AG

Carefully press ball socket -2- of selector lever cable in this position onto gearbox selector lever.

Note

- Take care not to bend gearbox selector lever when pressing on (counterhold if necessary).
- Take care not to bend or kink selector lever cable.
- Secure selector lever cable with retaining clip -1-.
- Align subframe and tunnel cross member on longitudinal members according to markings made before removal.
- Tighten subframe bolts only to specified torque (do not turn further); the bolts should only be fully tightened after performing the wheel alignment check ⇒ Running gear, axles, steering; Rep. gr. 40; Subframe; Exploded view subframe

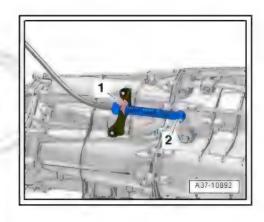

WARNING

Risk of accident if bolted connections are loose.

- Do NOT drive the vehicle unless the subframe bolts have been tightened to their final torque.
- Tighten bolts for tunnel cross-piece ⇒ Gearbox; Rep. gr. 34; Assembly mountings; Exploded view - assembly mountings.

Remaining installation steps are carried out in reverse sequence; note the following:

- Install propshaft ⇒ Rear final drive; Rep. gr. 39; Propshaft; Removing and installing propshaft.
- Install SCR catalytic converter ⇒ page 163.
- Install cover for reducing agent tank ⇒ page 167.
- Install control unit for NOx sender 2 J881- ⇒ page 148.
- Remove underbody trim (centre, left-side) ⇒ General body repairs, exterior; Rep. gr. 66; Underbody trim; Removing and installing underbody trim.
- Secure intermediate steering shaft to steering rack ⇒ Running gear, axles, steering; Rep. gr. 48; Steering column; Removing and installing intermediate steering shaft .

2.2 Supporting engine in installation position

Special tools and workshop equipment required

Support bracket - 10 - 222 A-

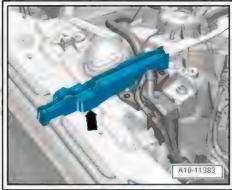

Procedure

WARNING

Risk of accident when weight of engine is shifted.

- In order to support the engine as described below, the gearbox and tunnel cross members must be installed.
- Remove engine cover panel ⇒ page 48.
- Remove air cleaner housing ⇒ page 129.
- Pull off foam wedge -arrow- (left and right) upwards.

Problem in the state of the sta

- Set up support bracket 10 222 A- on suspension turrets (left and right) and longitudinal member (right-side) as illustrated.
- Unplug electrical connectors and move wiring clear.
- Engage spindles -10 222 A /11- at engine lifting eyes (left and right).
- Partly take up weight of engine with spindles.

2.3 Removing and installing engine mountings

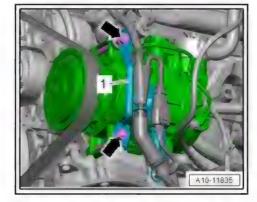

Removing

Support engine in installation position ⇒ page 43.

- Remove noise insulation panels ⇒ General body repairs, exterior; Rep. gr. 66; Noise insulation; Removing and installing noise insulation.
- Remove relevant front wheel spoiler ⇒ General body repairs, exterior; Rep. gr. 66; Wheel housing liners; Exploded view wheel housing liner (front).

Engine mounting (left-side):

- Remove poly V-belt ⇒ page 52.
- Remove nuts -arrows- and press bracket -1- to one side.
- Remove air conditioner compressor from bracket and tie up to front ⇒ Heating, air conditioning; Rep. gr. 87; Air conditioner compressor; Detaching and attaching air conditioner compressor at bracket.

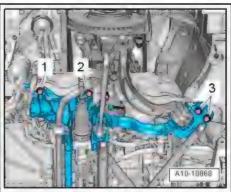

Remove bolt -2- for subframe (left-side).

Note

Bolts -1- and -3- on left side and all bolts for subframe on right side remain fitted.

Engine mounting (right-side):

- Remove bolt -1-.

Both sides (continued):

Move electrical connectors -2- (left and right) for electrohydraulic engine mounting solenoid valves -N144-/-N145-clear.

Proposition in the second reco

2 hours of the me to

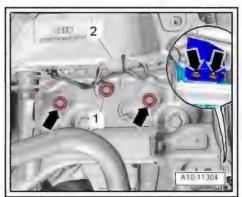

Remove bolts (left and right) -1- and -arrows- and place retaining plate to one side.

Note

Disregard -item 2-.

- Using spindle 10 222 A /11- -item 1-, raise engine through distance -a- on corresponding side.
- Distance -a- = approx. 20 mm.
- Detach engine mounting on relevant side.

Installation is carried out in reverse order; note the following:

Note

After removing, renew bolts tightened with specified tightening

- Electrical connections and routing ⇒ Current flow diagrams, Electrical fault finding and Fitting locations.
- Install poly V-belt ⇒ page 52.

Tightening torques

3.3 Removing and installing cylinder head

Removing

All procedures are described in \Rightarrow Servicing 6-cylinder TDI engine, common rail; Rep. gr. 15; Cylinder head; Removing and installing cylinder head.

Installing

Additional work:

- Change engine oil ⇒ Maintenance ; Booklet 411 .

3.4 Removing and installing cylinder head cover

⇒ "3.4.1 Removing and installing cylinder head cover - bank 1 (right-side)", page 66

⇒ "3.4.2 Removing and installing cylinder head cover - bank 2 (left-side)", page 67

3.4.1 Removing and installing cylinder head cover - bank 1 (right-side)

Special tools and workshop equipment required

Removal lever - 80 - 200-

Hose clamps, up to 25 mm - 3094-

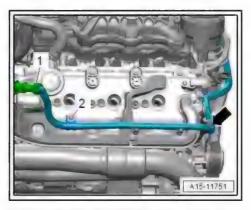

Hose clip pliers - VAS 6362-

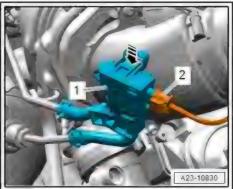

Removing

- Remove engine cover panel ⇒ page 48.
- Press release tabs on both sides and detach vacuum hose
- Remove bolt -2-.
- Move vacuum hose -arrow- clear and move to one side.
- Unplug electrical connector -2-.
- Release catch -arrow- and detach bracket with pressure differential sender - G505- -item 1- from connection.

- Lift retaining clip -3-, release hose clips -1 and 2- and detach coolant hoses.
- Unscrew bolts -arrows- and coolant pipe (right-side) from longitudinal member.

Note

For illustration purposes, the installation position is shown with the engine removed. Protected by copyright. Copying for private or commercial (

All further procedures are described in ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 15; Cylinder head; Removing and installing cylinder head.

Installing

Additional work:

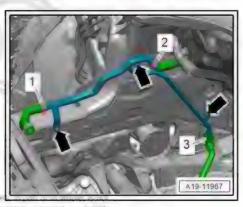

Install engine cover panel ⇒ page 48.

Tightening torques

◆ ⇒ Fig. ""Coolant pipe (right-side) - tightening torque", page 98

1.2 Checking cooling system for leaks

All procedures are described in \Rightarrow Servicing 6-cylinder TDI engine, common rail; Rep. gr. 19; Cooling system/coolant; Checking cooling system for leaks .

1.3 Draining and filling cooling system

Special tools and workshop equipment required

♦ Drip tray for workshop hoist - VAS 6208-

- Safety goggles
- Protective gloves

Draining

WARNING

Risk of injury as the radiator fans may start up automatically.

Even when the ignition is switched off, the radiator fans can start up without warning due to accumulated heat in the engine compartment, etc.

WARNING

Risk of scalding due to hot steam and hot coolant.

- The cooling system is under pressure when the engine is hot.
- To allow pressure to dissipate, cover filler cap on coolant expansion tank with cloth and open carefully.

- Remove noise insulation panels ⇒ General body repairs, ex-on in the terior; Rep. gr. 66; Noise insulation; Removing and installing noise insulation.
- Place drip tray for workshop hoist VAS 6208- beneath en-
- Remove drain plug -1- and drain off coolant.
- Lift retaining clip -2- and disconnect coolant hose from radiator.
- A19-11109

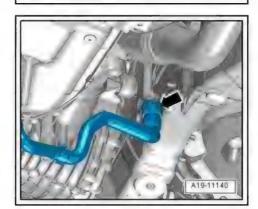

Connect coolant hoses (version with plug-in connectors) ⇒ page 105 .

Preparing coolant mixture and filling cooling system

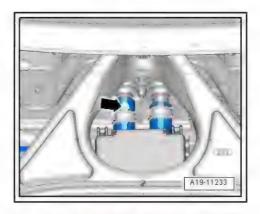

Prepare coolant mixture and fill cooling system ⇒ Servicing 6cylinder TDI engine, common rail; Rep. gr. 19; Cooling system/coolant; Draining and filling cooling system.

Bleeding cooling system

- Remove plenum chamber cover ⇒ General body repairs, exterior; Rep. gr. 50; Bulkhead; Removing and installing plenum chamber cover.
- Release coolant hose going to heat exchanger and pull back hose until coolant flows out at bleeder hole -arrow- in coolant hose.
- Push coolant hose back onto connection and secure with hose
- On vehicles with auxiliary heater, switch heater on (for about 30 seconds) and then off again.
- Close filler cap -arrow- on coolant expansion tank (make sure it engages).
- Start engine.

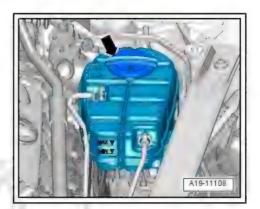

Time period	Engine speed	Air conditioner/heater setting		
2 minutes	2500 rpm	Air conditioning system "OFF", LED in AC button not lit Heating at "HI", select lowest possible blower speed (= 0)		
3 minutes	Idling speed	Air conditioning system "OFF"		
2 minutes	2500 rpm	Heating at "HI"		
3 minutes	Idling speed			
2 minutes	2500 rpm			
3 minutes Protected by	I dling speed			
1 minute	to the Switch off engine in it	er am int Court of the Alton Alice		
2 minutes	2500 rpm			
Until both large coolant hoses at radiator become warm	Idling speed			
1 minute	2500 rpm			

- Switch off ignition and allow engine to cool down.
- Install noise insulation panels ⇒ General body repairs, exterior; Rep. gr. 66; Noise insulation; Exploded view - noise insulation .
- Install plenum chamber cover ⇒ General body repairs, exterior; Rep. gr. 50; Bulkhead; Removing and installing plenum chamber cover.

- Check coolant level.
- The coolant level must be at the -MAX- marking when the engine is cold.
- The coolant level can be above the -MAX- marking when the engine is warm.

4.2 Removing and installing radiator

Note

Radiator and radiator cowl can only be removed and installed together.

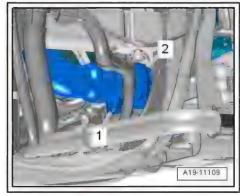

Special tools and workshop equipment required

◆ Drip tray for workshop hoist - VAS 6208-

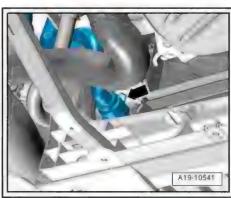

Removing

- Remove noise insulation (front) ⇒ General body repairs, exterior; Rep. gr. 66; Noise insulation; Removing and installing noise insulation.
- Remove impact absorber (front) ⇒ General body repairs, exterior; Rep. gr. 63; Bumper (front); Removing and installing impact absorber.
- Remove charge air cooler <u>⇒ page 117</u>.
- Place drip tray for workshop hoist VAS 6208- beneath engine.
- Remove drain plug -1- and drain off coolant.
- Pull out retaining clip -2- and disconnect coolant hose from radiator.

Lift retaining clip -arrow- and detach connection (bottom left) from radiator.

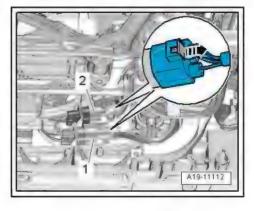

WARNING

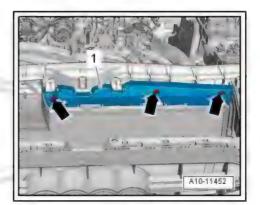

Risk of injury as the radiator fans may start up automatically.

♦ Unplug electrical connectors before starting to work in the area of radiator cowl.

permitted unless authorised by AUDI AG. AUDI AG does not guarantee or accept any liat

-with Unplug electrical connector #1- and, if fitted, #2- for radiator fan (push retainer to the rear -arrow- and press down release catch).

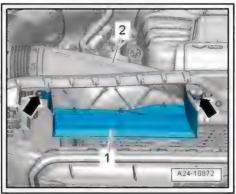

Remove bolts -arrows- and detach air duct -1- from lock carrier.

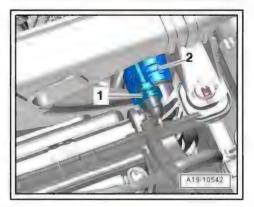

Note

Disregard -item 2-.

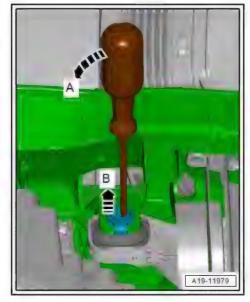

Protected by copyright. Copying for private or commercial purposes, in page 1975. per mar in a particular distriction of the period of the p

Lift retaining clips -1, 2- and detach connection from radiator.

- Release retaining pins for radiator on both sides -arrow A- and pull out upwards -arrow B-.
- Remove condenser ⇒ Heating, air conditioning; Rep. gr. 87; Refrigerant circuit; Removing and installing condenser.

- Remove bolt -1- on both sides and detach radiator bracket with radiator from lock carrier -arrow-.
- Detach radiator.

 Press locking tabs on left and right sides of radiator cowl together -arrow- and lift radiator cowl off radiator.

Installing

Installation is carried out in reverse order; note the following:

Note

If there are slight impressions on the fins, refer to ⇒ Servicing 6cylinder TDI engine, common rail; Rep. gr. 00; Repair notes; Installing radiators and condensers .

- Electrical connections and routing ⇒ Current flow diagrams, Electrical fault finding and Fitting locations.
- Connect coolant hose with plug-in connector ⇒ page 105.
- Install charge air cooler ⇒ page 117.

Note

Do not reuse coolant.

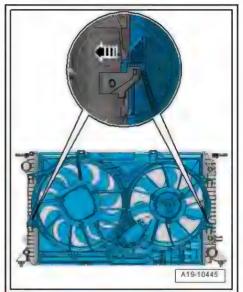

Fill up with coolant ⇒ page 85.

2.2 Exploded view - hose connections for charge air system

All components are described in ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 21; Charge air system; Exploded view - hose connections for charge air system.

2.3 Removing and installing charge air cooler

Removing

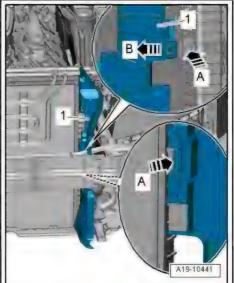

- Observe rules for cleanliness ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 00; Repair notes; Rules for cleanliness.
- Remove closure plate for bumper cover ⇒ General body repairs, exterior; Rep. gr. 63; Bumper (front); Removing and installing attachments.
- Remove lock carrier cover ⇒ General body repairs, exterior; Rep. gr. 63; Bumper (front); Removing and installing attachments.

WARNING

Risk of injury as the radiator fans may start up automatically.

 Unplug electrical connectors before starting to work in the area of radiator cowl. Release catches -arrows A- and swivel air duct -1- on left and right to centre of vehicle -arrow B-.

Primite test, prist Con stringer white body to be entered to

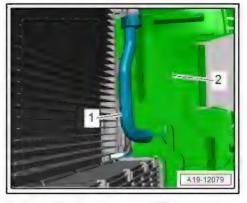

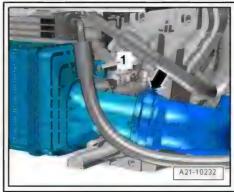

Note

- Depending on the version, an air duct -2- that surrounds the refrigerant line -1- may be fitted on the left, as shown in the illustration.
- This air duct cannot be removed and remains in its installation position after the radiator has been unclipped.

- Release hose clip -1- and detach air hose from charge air cooler.
- Push catch down -arrow A- and move top of charge air cooler slightly in direction of -arrow B-.
- Detach charge air cooler by pulling upwards.
- Remove charge air cooler, paying special attention to air ducts (left-side).

Installing

Installation is carried out in reverse order; note the following:

Note

If there are slight impressions on the fins, refer to ⇒ Servicing 6cylinder TDI engine, common rail; Rep. gr. 00; Repair notes; Installing radiators and condensers .

Install lock carrier cover and closure plate at bumper cover ⇒ General body repairs, exterior; Rep. gr. 63; Bumper (front); Exploded view - bumper cover .

Note

If there are slight impressions on the fins, refer to ⇒ Servicing 6cylinder TDI engine, common rail; Rep. gr. 00; Repair notes; Installing radiators and condensers .

3.2 Removing and installing air cleaner housing

Removing

- Remove engine cover panel ⇒ page 48.
- Remove lock carrier cover ⇒ General body repairs, exterior; Rep. gr. 63; Bumper (front); Removing and installing attachments.
- Remove bolts -arrows- and detach air duct -1-.

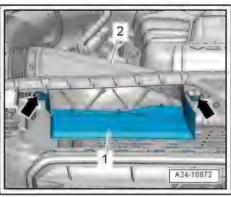

Remove bolts -arrows-, detach air duct -2- from lock carrier and unclip from air cleaner housing.

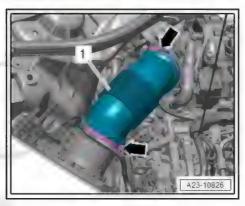

Note

Disregard -item 1-.

- Release hose clips -arrows- and remove air pipe -1-.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by AUDI AG. AUDI AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by AUDI AG.

- Detach retaining clip -3- with fuel hoses from air cleaner housing and push to one side.
- Unplug electrical connector -2- at air mass meter G70- and move clear.
- Lift off air cleaner housing -1-.

Installing

Note

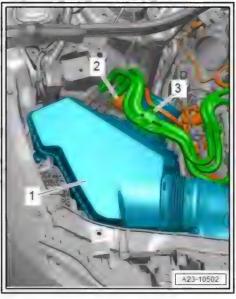

- The air cleaner housing must always be clean.
- To prevent malfunctions, cover critical parts of the engine air intake (air mass meter, air pipes etc.) with a clean cloth when blowing out the air cleaner housing with compressed air.
- Hose connections and air pipes/hoses must be free of oil and grease prior to fitting.
- Use a lubricant (silicone-free) when installing air hoses.
- Secure all hose connections with correct type of hose clips (as original equipment) ⇒ Electronic parts catalogue .
- Check air pipe (engine intake side) for salt residue, dirt and leaves.
- Check air duct leading from lock carrier to air cleaner housing for dirt and leaves.

Remaining installation steps are carried out in reverse sequence; note the following:

- Install lock carrier cover ⇒ General body repairs, exterior; Rep. gr. 63; Bumper (front); Removing and installing attach-
- Install engine cover panel ⇒ page 48.

6.1 Removing and installing intake air temperature sender - G42-

Removing

- Remove wheel spoiler (front left) ⇒ General body repairs, exterior; Rep. gr. 66; Wheel housing liners; Removing and installing wheel housing liner (front).
- Unplug electrical connector -1-.
- Unscrew bolt -2- and pull intake air temperature sender G42out of air pipe rectness of information in the property of the control of the con

Installing

Installation is carried out in reverse order; note the following:

Note

Renew O-ring after removal.

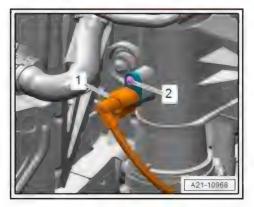

Tightening torques

- ⇒ "2.1 Exploded view charge air system", page 116
- Wheel spoiler ⇒ General body repairs, exterior; Rep. gr. 66; Wheel housing liners; Exploded view - wheel housing liner (front)

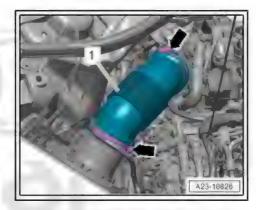

Removing

Remove engine cover panel ⇒ page 48.

Release hose clips -arrows- and remove air pipe -1-.

- Unplug electrical connector -1-.
- Release fasteners -arrows- all around and detach air mass meter - G70- -item 2-.

Installing

Installation is carried out in reverse order; note the following:

To ensure that the air mass meter - G70- functions correctly, it is important to observe the following notes and procedures.

Note

- If the air filter element is very dirty or wet, dirt particles or water can reach the air mass meter and falsify the detected air mass values. This will cause a loss of power, as the calculated injection quantities will be too low.
- Secure all hose connections with correct type of hose clips (as original equipment) ⇒ Electronic parts catalogue .
- Press air mass meter G70- into air cleaner housing until it clicks into place.
- Install engine cover panel ⇒ page 48.

Tightening torques

Removing and installing fuel tempera-6.3 ture sender - G81-

Removing

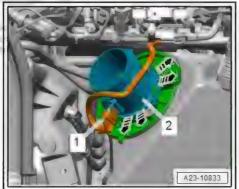

Remove air cleaner housing ⇒ page 129.

All further procedures are described in ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 23; Senders and sensors; Removing and installing fuel temperature sender - G81-.

Installing

Additional work:

Install air cleaner housing ⇒ page 129.

6.4 Removing and installing fuel pressure sender - G247-

Removing

Remove engine cover panel ⇒ page 48.

All further procedures are described in ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 23; Senders and sensors; Removing and installing fuel pressure sender - G247-.

Installing

Additional work:

Install engine cover panel ⇒ page 48.

6.5 Removing and installing fuel pressure sender for low pressure - G410-

Removing

Remove engine cover panel ⇒ page 48.

All further procedures are described in ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 23; Removing and installing fuel pressure sender for low-pressure - G410-.

Installing

Additional work:

Install engine cover panel ⇒ page 48.

Removing and installing pressure differ-6.6 ential sender - G505-

Note

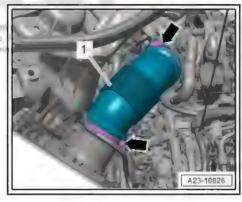

The pressure differential sender - G505- detects the amount of deposits in the emission control module.

Special tools and workshop equipment required

Vehicle diagnostic tester

Removing

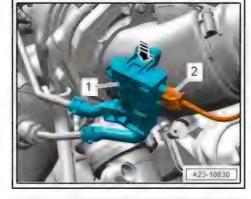

- Release hose clips -arrows- and remove air pipe -1-.

- Unplug electrical connector -2-.
- Release catches -arrow- and detach bracket with pressure differential sender - G505- -item 1- from connection.

Version 1

- Press release tabs on both sides and disconnect crankcase breather hose -2-.
- Unscrew bolts -arrows- and detach intake connecting pipe

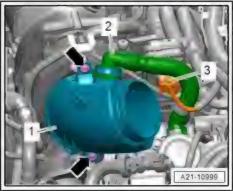

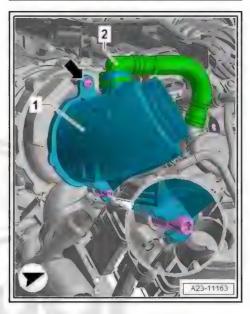

Note

Disregard -item 3-.

Version 2

- Press release tabs on both sides and disconnect crankcase breather hose -2-.
- Unscrew bolt -1-, turn intake connecting pipe -1- anti-clockwise and detach it.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not a ermitted unless authorised by AUDI AG. AUDI AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by AUDI AG.

- Detach pressure differential sender G505- -item 1- from bracket -2-; to do so, release catches -arrows- and move hoses clear.
- Release clips -3- and spray hoses with silicone-free lubricant.
- To prevent hose connections from breaking off, carefully disconnect hoses and keep them straight when pulling them off.

Installing

Installation is carried out in reverse order; note the following:

Note

- Renew O-ring after removal.
- Blow through hose (towards emission control module) with compressed air to remove dirt or ice (frozen condensation).
- Make sure that hoses are securely fitted and that there are no leaks.
- If pressure pipes have been detached from emission control module, tighten connections to specified torque.
- Secure all hose connections with correct type of hose clips (as original equipment) ⇒ Electronic parts catalogue .
- Install engine cover panel ⇒ page 48.
- If pressure differential sender G505- has been renewed, perform adaption in Guided Function 0001 - Adapt learnt values - after component replacement ⇒ Vehicle diagnostic tester.

6.7 Checking fuel pressure regulating valve - N276-

Special tools and workshop equipment required

♦ Hose clamps, up to 25 mm - 3094-

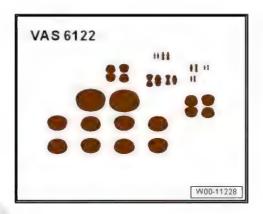

' et' , ' it. '}

◆ Engine bung set - VAS 6122-

- ♦ Fuel-resistant measuring container
- ♦ Test hose for return line connection

Procedure

WARNING

Risk of malfunctions caused by dirt.

◆ Observe rules for cleanliness ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 00; Repair notes; Rules for cleanliness .

Remove engine cover panel ⇒ page 48.

Note

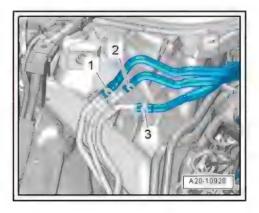

Fuel temperature above 15 °C.

Detach fuel return hose -2-.

Note

Disregard items -1 and 3-.

- Seal off open return line connection with a test hose -2- and a hose clamp up to 25 mm - 3094-.
- Hold end of fuel return hose -1- in measuring container.
- Start engine and run at idling speed for one minute.
- Return flow rate (engine start): 0 ml
- Leave engine running at idling speed.
- While engine is running, empty measuring container, or exchange it for an empty container and begin measurement.
- Leave engine running at idling speed for two minutes and measure return flow rate.
- Return flow rate after 2 minutes: 0 ... 60 ml

Note

If specified values are obtained, fuel pressure regulating valve -N276- is OK.

If values do not match specifications:

Note

- The fuel pressure regulating valve N276- and injectors were checked during the preceding measuring process.
- To determine which component is defective, you must check the return flow rate of the injectors.
- Measure return flow rate of injectors with engine running ⇒ page 137 .
- If return flow rate of injectors is OK, renew fuel pressure regulating valve - N276- .
- If return flow rate of injectors is not OK, renew defective injec-

Attaching

Assembly is carried out in reverse sequence; note the following:

- Connect fuel return hose ⇒ Fuel supply system; Rep. gr. 20; Plug-in connectors; Disconnecting plug-in connectors.
- Install engine cover panel ⇒ page 48.

Removing and installing fuel pressure 6.8 regulating valve - N276-

Removing

Installation position of front clamp

- · Installation position: bolted connections face outwards.
- Angle $-\alpha$ = 10°

Installation position of rear clamps

- Install clamps so that the bolt ends do not protrude beyond bottom of clamp.
- · Installation position: bolted connections face forwards.

Removing and installing front exhaust pipe

Removing

Remove engine cover panel ⇒ page 48.

WARNING

When working on all parts of the exhaust system:

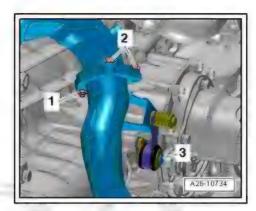

- Observe safety precautions when working on the exhaust system ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 00; Safety precautions; Safety precautions when working on the exhaust system .
- Remove nuts (accessible from above) -2- for front exhaust

Note

The nut -1- and bolt -3- are removed at a later stage.

Remove noise insulation (rear) ⇒ General body repairs, exterior; Rep. gr. 66; Noise insulation; Removing and installing noise insulation.

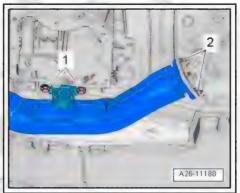

Caution

Risk of damage to flexible joint in front exhaust pipe.

- Do NOT bend flexible joint in front exhaust pipe more than
- Remove bolts -1- and nuts -2- and lower exhaust pipe slightly.

- Lower front exhaust pipe slightly at rear and unscrew nut -1-.
- Detach front exhaust pipe.

Installing

Installation is carried out in reverse order; note the following:

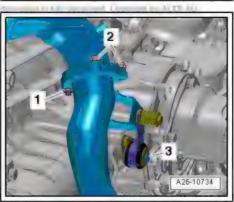

Note

Renew gaskets and self-locking nuts after removal.

- Align the exhaust system so it is free of stress ⇒ page 159.
- Install engine cover panel ⇒ page 48.

Tightening torques

- ⇒ "2.1 Exploded view emission control system", page 161
- ⇒ General body repairs, exterior; Rep. gr. 66; Noise insulation; Exploded view - noise insulation

1.3 Separating exhaust pipes/silencers

- The connecting pipe can be cut through at the point marked in order to renew the Y-pipe or rear silencer(s) separately.
- The cutting point is marked by an indentation on the circumference of the exhaust pipe.

Special tools and workshop equipment required

♦ Chain pipe cutter - VAS 6254-

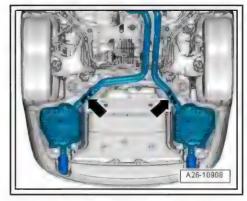

Procedure

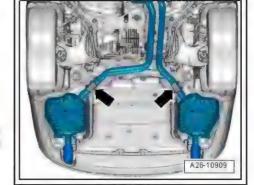

WARNING

When working on all parts of the exhaust system:

- Observe safety precautions when working on the exhaust system ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 00; Safety precautions; Safety precautions when working on the exhaust system .
- Cut through exhaust pipes at right angles at the positions marked -arrows- using chain pipe cutter - VAS 6254- .
- Position centre of clamps -arrows- over cutting location.

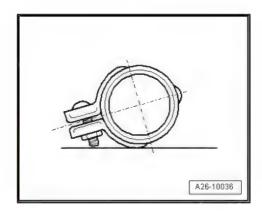

Protected to constant for a contraction of the cont whitespell treeze tres tithing of the post of post page As

- Install clamps so that the bolt ends do not protrude beyond bottom of clamp.
- Installation position: bolted connections face forwards.
- Align the exhaust system so it is free of stress ⇒ page 159.

1.4 Removing and installing silencers

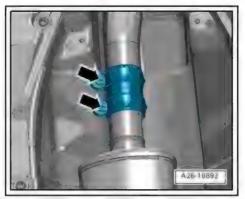

Removing

WARNING

When working on all parts of the exhaust system:

- Observe safety precautions when working on the exhaust system ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 00; Safety precautions; Safety precautions when working on the exhaust system .
- Remove tunnel cross-piece (rear) ⇒ General body repairs, exterior; Rep. gr. 66; Underbody trim; Removing and installing tunnel cross-piece.
- Unfasten connections -arrows-, push clamp towards rear and tie up SCR catalytic converter.

Protectors, report Con, or there are a purposes of early of above some permitted and the state A to A TO A to A to the control of the state of the who continued to sold the adventage of the companies Al DiAG

WARNING

Risk of accident caused by weight of silencers.

- A second mechanic is required for removal of the rear silencers.
- Unscrew bolts -1, 2- and remove silencers.

Installing

Installation is carried out in reverse order; note the following:

Note

Renew gaskets and self-locking nuts after removal.

Align the exhaust system so it is free of stress ⇒ page 159.

Tightening torques

◆ Tunnel cross-piece ⇒ General body repairs, exterior; Rep. gr. 66; Underbody trim; Overview of fitting locations - trim panels

1.5 Stress-free alignment of exhaust system

Procedure

WARNING

When working on all parts of the exhaust system:

- ♦ Observe safety precautions when working on the exhaust system ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 00; Safety precautions; Safety precautions when working on the exhaust system .
- The exhaust system must be aligned when it is cool.

Vehicles without clamps between Y-pipe and rear silencers

- Loosen bolt connections for front clamp(s).
- Push exhaust system towards front of vehicle -arrow until mountings for Y-pipe are preloaded by -a- = 6 ... 10 mm.
- Tighten bolted connections on clamps evenly.

A26-0101

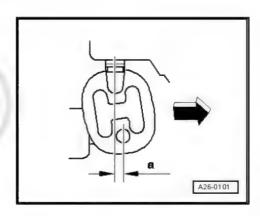

Vehicles with clamps between Y-pipe and rear silencers

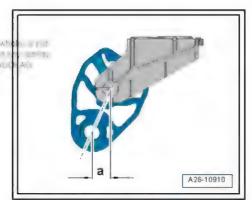

Note

On a vehicle with clamps fitted between Y-pipe and rear silencers, it is also necessary to align the Y-pipe.

- Loosen bolted connections on front and rear clamps.
- Push exhaust system towards front of vehicle -arrow- until mountings for Y-pipe are preloaded by -a- = 6 ... 10 mm.
- Tighten bolt connections on front clamp(s) evenly.
- Push rear section of exhaust system towards front of vehicle -arrow-, so that mountings (rear) for rear silencers are preloaded by -a- =rdebted 55 mm: Pir. A.D. AG A.M. AT CO
- Align rear silencers so they are horizontal.
- Tighten bolted connections on rear clamps evenly.

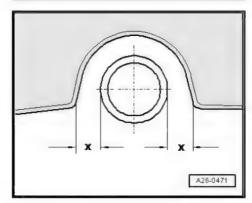

- Check clearance between tailpipes and bumper on both sides:
- Dimension -x- (left-side) = dimension -x- (right-side)

Tightening torques

2.3 Removing and installing emission control module

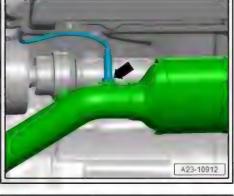

Removing

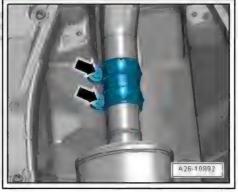

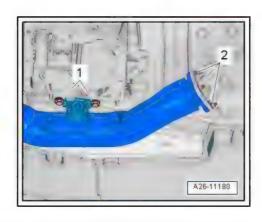

WARNING

When working on all parts of the exhaust system:

- Observe safety precautions when working on the exhaust system ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 00; Safety precautions; Safety precautions when working on the exhaust system.
- Remove noise insulation (rear) ⇒ General body repairs, exterior; Rep. gr. 66; Noise insulation; Removing and installing noise insulation.
- Remove bolts -1- and nuts -2- and lower exhaust pipe slightly.

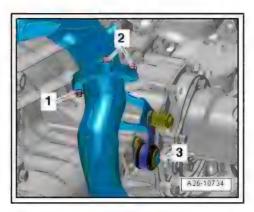

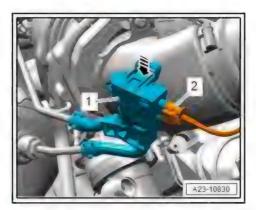

Unscrew nut -1-.

Note

- The nuts -2- are removed at a later stage.
- Disregard -item 3-.
- Secure front exhaust pipe to SCR catalytic converter with a
- Remove plenum chamber partition panel ⇒ General body repairs, exterior; Rep. gr. 50; Bulkhead; Removing and installing plenum chamber partition panel.
- Unplug electrical connector -2-.
- Release catch -arrow- and detach bracket with pressure differential sender G505- -item 1- from connection.

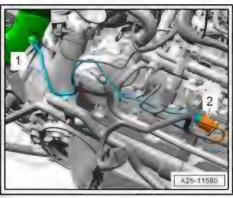

Unplug electrical connector -2- at exhaust gas temperature sender 4 - G648- and move electrical wiring clear.

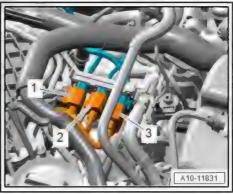

Note

Disregard -item 1-.

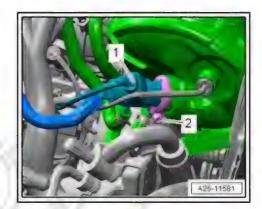

Unplug electrical connectors -1, 2, 3- and move electrical wiring clear.

- Unscrew bolt -2- and loosen retaining clip.
- Detach injector for reducing agent N474--item 1- and place to one side.

- Remove bolt -3- on retainer.
- Open screw-type clip -1- and place it on intake funnel of emission control module.
- Remove emission control module -2-.

Installing

Installation is carried out in reverse order; note the following:

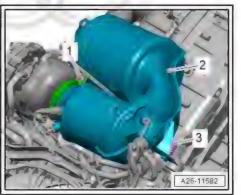

Pretected by copyright. Copyring for private or permitted unless authorised by AUDI AG. AUI with respect to the correctness of informati

Renew gaskets and self-locking nuts after removal.

- Electrical connections and routing ⇒ Current flow diagrams, Electrical fault finding and Fitting locations.
- Install injector for reducing agent N474- ⇒ page 175.
- Install plenum chamber partition panel ⇒ General body repairs, exterior; Rep. gr. 50; Bulkhead; Removing and installing plenum chamber partition panel.
- If emission control module has been renewed, perform adaption in Guided Function 0001 - Adapt learnt values after component replacement > Vehicle diagnostic tester.

3.5 Draining reducing agent tank

Procedure

WARNING

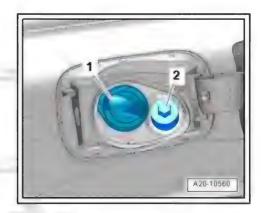

Reducing agent can cause skin irritation.

- Observe safety measures when handling reducing agent ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 00; Safety precautions; Safety precautions when working on the SCR system .
- Put on safety goggles.

Safety risk due to escaping reducing agent.

To prevent large amounts of reducing agent from escaping when the metering line is opened, wait until the reducing agent has been drawn back automatically ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 00; Safety precautions; Safety precautions when working on the SCR system.

permitted unless authorised by AUDI AG

AG does not guarantee or accept any liability n this document. Copyright by AUDI AG

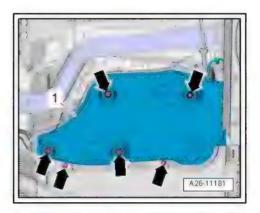

- Switch off ignition.
- Open tank flap.
- Unscrew filler cap -2- from filler neck for reducing agent.

Note

Disregard -item 1-.

Remove bolt and nuts -arrows- and detach cover -1- for reducing agent tank.

- Place drip tray underneath.
- Press release tab to remove plug -arrow-, drain off reducing agent into a drip tray and refit plug.
- Adapt learnt value after filling with reducing agent or renewing components ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 00; Repair notes; Adapting learnt values for SCR system.

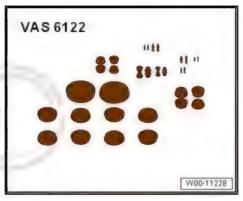

Removing and installing reducing agent 3.6

Special tools and workshop equipment required

♦ Engine and gearbox jack - VAS 6931-

Engine bung set - VAS 6122-

COLD FOR STREET, AND AGE

Removing

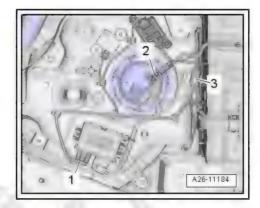

WARNING

Reducing agent can cause skin irritation.

- Observe safety measures when handling reducing agent ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 00; Safety precautions; Safety precautions when working on the SCR system.
- Put on safety goggles.
- Drain reducing agent tank ⇒ page 170.
- Detach underbody trim (rear left) ⇒ General body repairs, exterior; Rep. gr. 66 ; Underbody trim; Removing and installing underbody trim.

- Press release tabs and disconnect metering line -2-.
- Unplug electrical connectors -1, 3- and move electrical wiring harness clear.

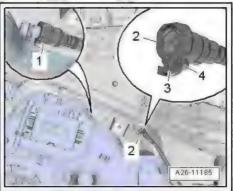

Note

Hold a clean cloth under the separating point to catch escaping reducing agent.

- Press release tab and disconnect filler line -1-.
- Press blue slider -4- to release catch -3- and disconnect breather lines -2-.
- Seal off open lines and connections with plugs (thoroughly cleaned) from engine bung set - VAS:61:22-y copyright. Copying for a permitted unless authorised b. *

with respect to 1/10.

WARNING

Safety risk due to escaping reducing agent.

- Reducing agent tank must be empty when it is removed.
- Position engine and gearbox jack underneath reducing agent tank with a soft foam surface in between for support.
- Remove bolts -arrows- (have a second mechanic support the reducing agent tank by hand).

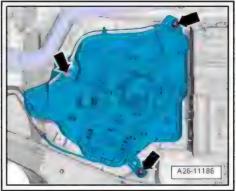

Note

For greater clarity the reducing agent tank is shown without the engine and gearbox jack.

- Lower reducing agent tank using engine and gearbox jack, simultaneously guiding reducing agent tank down by hand.
- Seal off open lines and connections with plugs (thoroughly cleaned) from engine bung set - VAS 6122-.

Installing

Installation is carried out in reverse order; note the following:

- Push filler line -1- and breather line -2- onto connection so that they engage audibly.
- Pull to check that plug-in connectors are correctly engaged.
- Press in catch -3- to secure.
- Check that lines are clipped onto reducing agent tank.

Note

Disregard -item 4-.

- Adapt learnt value after filling with reducing agent or renewing components - Servicing 6-cylinder TDI engine, common rail; Rep. grant 00 pi Repair notes; Adapting learnt values for SCRany liability systemvit

Tightening torques

- ♦ ⇒ "3.1 Exploded view reducing agent tank", page 167.

3.7 Removing and installing delivery unit for reducing agent

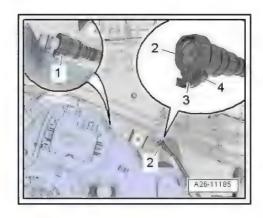

Special tools and workshop equipment required

◆ Engine bung set - VAS 6122-

♦ Key - T40268-

Removing

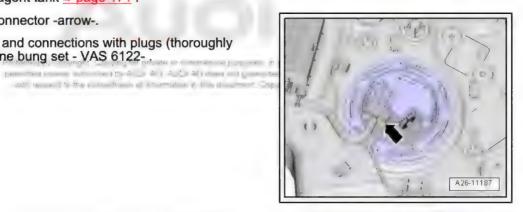

WARNING

Reducing agent can cause skin irritation.

- Observe safety measures when handling reducing agent ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 00; Safety precautions; Safety precautions when working on the SCR system.
- Remove reducing agent tank ⇒ page 171.
- Unplug electrical connector -arrow-.
- Seal off open lines and connections with plugs (thoroughly cleaned) from engine bung set - VAS 6122-

Attre of the continuous transfer of

- Turn locking ring -1- anti-clockwise with wrench -T40268- to release and detach.
- Pull reservoir with pump for reducing agent V437- out of reducing agent tank.

Installing

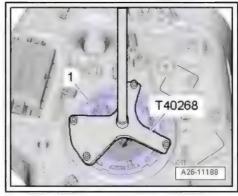

Installation is carried out in reverse order; note the following:

Caution

Take care to keep components clean.

Observe rules for cleanliness ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 00; Repair notes; Rules for cleanliness .

Note

- Renew seal after removing.
- Thoroughly clean sealing surfaces for seal.

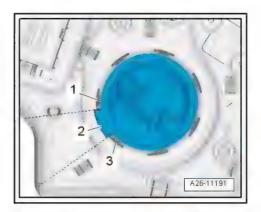

Caution

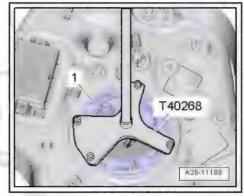

Risk of malfunctions.

- The seal must not be twisted.
- Do not kink heating mats when installing.

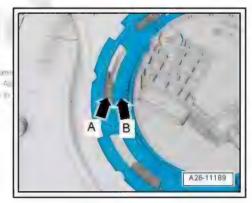

- Move reservoir into installation position:
- Lug -2- on flange must be between tabs -1- and -3-.
- Direction of installation for lug -2- as shown in illustration.

Turn locking ring -1- clockwise with wrench -T40268- to lock.

- Locking ring is properly locked when lugs on locking ring are opposite lugs on support ring of reducing agent tank -arrows A, B-.
- Install reducing agent tank ⇒ page 171.
- Adapt learnt value after filling with reducing agent or renewing AUDI components ⇒ Servicing 6-cylinder TDI engine, common rail, Rep. gr. 00; Repair notes; Adapting learnt values for SCR system.

Removing and installing injector for re-3.8 ducing agent - N474-

Removing

Remove engine cover panel ⇒ page 48.

All further procedures are described in ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 26; SCR (selective catalytic reduction) system; Removing and installing injector for reducing agent - N474- .

Installing

Additional work:

Install engine cover panel ⇒ page 48.

3.9 Removing and installing control unit for reducing agent metering system - J880-

Special tools and workshop equipment required

Vehicle diagnostic tester

Removing

- Switch off ignition.
- Remove bolt and nuts -arrows- and detach cover -1- for reducing agent tank.

- Remove bolts -arrows- and detach control unit for reducing agent metering system - J880- .
- Unplug electrical connectors -1, 2-.

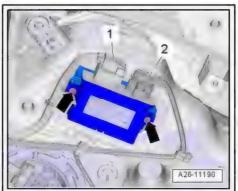

Installing

Installation is carried out in reverse sequence.

If control unit for reducing agent metering system - J880- has been renewed, perform adaption in Guided Function 0001 -Adapt learnt values - after component replacement ⇒ Vehicle diagnostic tester.

Removing and installing exhaust gas re-5.2 circulation cooler

All procedures are described in ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 26; Exhaust gas recirculation; Removing and installing exhaust gas recirculation cooler.

5.3 Removing and installing exhaust gas recirculation temperature sensor - G98-

Removing

Remove engine cover panel ⇒ page 48.

All further procedures are described in ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 26; Exhaust gas recirculation; Removing and installing exhaust gas recirculation temperature sensor - G98- .

Installing

Additional work:

Install engine cover panel ⇒ page 48.

6 Exhaust manifolds

- ⇒ "6.1 Exploded view exhaust manifold", page 182
- ⇒ "6.2 Removing and installing exhaust manifolds", page 183

6.1 Exploded view - exhaust manifold

WARNING

When working on all parts of the exhaust system:

Observe safety precautions when working on the exhaust system ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 00; Safety precautions; Safety precautions when working on the exhaust system .

Note

The illustration shows the exhaust manifold for cylinder bank 2 (left-side).

1 - Nut

Tightening torques and installation instructions ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 26; Exhaust manifold; Exploded view - exhaust manifold

2 - Exhaust manifold

Removing and installing ⇒ page 183

3 - Gasket

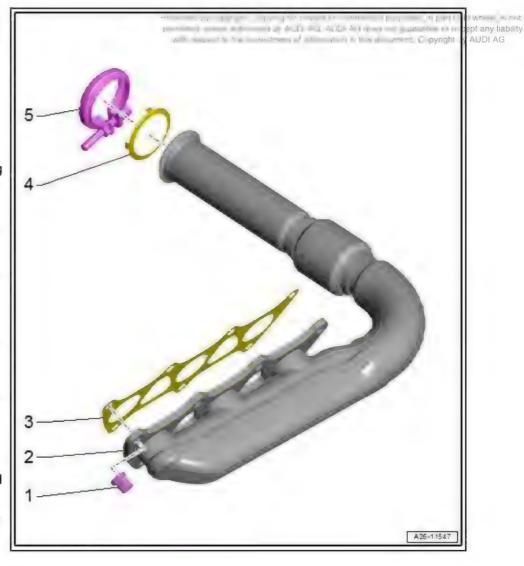

Installation instructions ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 26; Exhaust manifolds; Exploded view - exhaust manifold

4 - Gasket

Installation instructions ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 26; Exhaust manifolds; Exploded view - exhaust manifold

5 - Screw-type clip

□ Tightening torques ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 21; Turbocharger; Exploded view turbocharger

■ Mark position of screwtype clip prior to removal

6.2 Removing and installing exhaust mani-

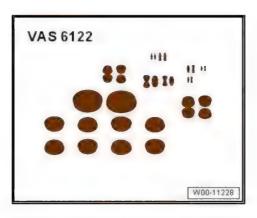

⇒ "6.2.1 Removing and installing exhaust manifold (left-side)",

⇒ "6.2.2 Removing and installing exhaust manifold (right-side)", page 185

6.2.1 Removing and installing exhaust manifold (left-side)

Special tools and workshop equipment required

♦ Engine bung set - VAS 6122-

Hose clip pliers - VAS 6362-

Removing

WARNING

When working on all parts of the exhaust system:

- Observe safety precautions when working on the exhaust system ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 00; Safety precautions; Safety precautions when working on the exhaust system.
- Remove emission control module page 164.
- Remove throttle valve module J338- ⇒ page 134.
- Remove poly V-belt ⇒ page 52.

1 1 21

Unscrew nuts -arrows- and move clear coolant pipe on longitudinal member.

Protected by copyright. Copying permitted unless authorised by A

- Unscrew bolt -1- and detach coolant expansion tank.
- Unplug electrical connector -2- and move coolant expansion tank to one side with coolant hoses attached.
- Remove noise insulation (front) ⇒ General body repairs, exterior; Rep. gr. 66; Noise insulation; Removing and installing noise insulation.
- Remove wheel spoiler (front left) ⇒ General body repairs, exterior; Rep. gr. 66; Wheel housing liners; Exploded view wheel housing liner (front).

Remove nuts -arrows- and press bracket -1- to one side.

Caution

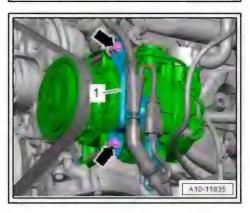

Danger of damage to refrigerant lines and hoses.

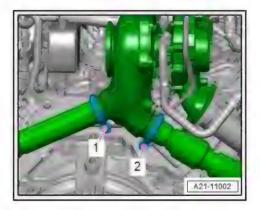

- Do NOT stretch, kink or bend refrigerant lines and hoses.
- Remove air conditioner compressor from bracket and tie up to front ⇒ Heating, air conditioning; Rep. gr. 87; Air conditioner compressor; Detaching and attaching air conditioner compressor at bracket.
- Use a felt-tip pen to mark installation position of screw-type clip -1-.
- Unfasten and detach screw-type clip -1-.

Note

Disregard -item 2-.

Remove nuts -arrows- and detach exhaust manifold.

Installing

Installation is carried out in reverse order; note the following:

Note

- Renew gaskets, seals, self-locking nuts and screw-type clip after removal.
- If installation positions have been marked, pay attention to these when installing parts.
- Install air conditioner compressor ⇒ Heating, air conditioning; Rep. gr. 87; Air conditioner compressor; Detaching and attaching air conditioner compressor at bracket .
- Install poly V-belt ⇒ page 52.
- Install throttle valve module J338- ⇒ page 134.
- Install emission control module ⇒ page 164.

Tightening torques

- ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 26; Exhaust manifolds; Exploded view - exhaust manifold
- ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 21; Charge air system; Exploded view - hose connections for charge air system
- Wheel spoiler ⇒ General body repairs, exterior; Rep. gr. 66; Wheel housing liners; Exploded view - wheel housing liner (front)
- ⇒ General body repairs, exterior; Rep. gr. 66; Noise insulation; Exploded view - noise insulation

6.2.2 Removing and installing exhaust manifold (right-side)

Special tools and workshop equipment required

♦ Hose clamps, up to 25 mm - 3094-

Removing

WARNING

When working on all parts of the exhaust system:

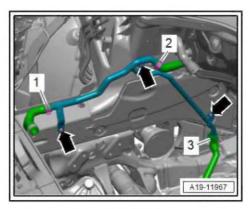

- Observe safety precautions when working on the exhaust system ⇒ Servicing 6-cylinder TDI engine, common rail; Rep. gr. 00; Safety precautions; Safety precautions when working on the exhaust system .
- Remove emission control module ⇒ page 164.
- Remove air cleaner housing ⇒ page 129.
- Remove noise insulation (front) ⇒ General body repairs, exterior; Rep. gr. 66; Noise insulation; Removing and installing noise insulation.
- Clamp off coolant hoses with hose clamps -3094- .
- Lift retaining clip -3-, release hose clips -1 and 2- and detach coolant hoses.
- Unscrew bolts -arrows- and coolant pipe (right-side) from longitudinal member.

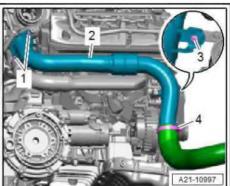

Note

For illustration purposes, the installation position is shown with the engine removed.

- Release hose clip -4- and detach air hose from air pipe.
- Unscrew bolts -1 and 3- and move air pipe -2- to rear.

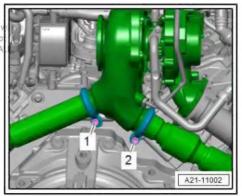

- Use a felt-tip pen to mark installation position of screw-type Clip -2-. Protected by copyright. Copying for private or commercial purposes, in part or in permitted unless authorised by AUDI AG.
